PMM PROJECTS

Retenza — Product Marketing & GTM Case Study

Healthtech

Self-initiated · WhatsApp-native patient retention platform for community pharmacies in Ghana

- Conducted customer discovery interviews with pharmacy owners, pharmacists, and technicians using The Mom Test framework
- Mapped competitive landscape across 9 global and local players — identified clear positioning whitespace
- Built full positioning brief, ICP segmentation, and audience-specific messaging frameworks
- Designed 30-day WhatsApp patient onboarding sequence grounded in behavioral insight
- Developed staged GTM plan with channel prioritisation, pricing hypotheses, and success metrics
- Built working product MVP — presented to pharmacy chain operator managing 10+ Ghana locations — validated problem, received unprompted requirement for multi-location dashboard

"They were already doing this manually in WhatsApp groups — what they needed was something measurable and systematic." — Pharmacy chain operator, Ghana

MEDvidi — Messaging & Positioning Audit

SaaS / Telehealth

Independent PMM analysis · US-based online mental health platform

- Audited live homepage — identified generic messaging failing to differentiate against BetterHelp and Talkspace
- Mapped ICP (overwhelmed professional, 28-40) — primary pain is the broken healthcare system, not the condition itself
- Proposed sharper headline: diagnosis + treatment + medication within 24 hours
- Built full benefits framework with priority rankings across functional, emotional, and accrued benefits
- Wrote 500-word blog piece targeting high-intent audience at peak frustration moment

WORK EXPERIENCE

Dispensing Lab Support — National Service

Nov 2022 – Oct 2023

Kumasi Technical University

- Observed how communication gaps create operational breakdowns — direct insight informing Retenza customer discovery
- Worked across student, faculty, and administrative audiences — built ability to adapt communication for different people
- Managed inventory systems and practical session coordination in a high-volume educational environment

Student Pharmacy Technician

Oct 2021 – Jun 2022

HopeXchange Medical Centre

- Observed recurring medication adherence and follow-up failures firsthand — the direct origin of the Retenza insight
- Communicated daily with patients about medication — learned how people actually think about health vs how clinicians assume
- Used HAMS pharmacy software for patient and prescription workflow management

Pharmacy Technician

Mar 2021 – Sep 2021

South Suntresu Government Hospital

- Supported high-volume dispensing and patient communication in a fast-paced hospital pharmacy
- Developed plain-language communication instinct working with patients across different conditions and literacy levels
- Observed the consistent gap between what healthcare providers say and what patients actually understand or retain
